OIL EXPRESS SERVICE

**Oil change services
now available!**

All oil changes now include our
NEW 5-Point Safety Inspection,
5qts of Synthetic Blend oil and a
quality oil filter!

Oil change services offered from 8 a.m.
to 3 p.m., Wednesday through Friday

**Only
\$32.00**

5-Point Car Safety Inspection

FREE

with every purchase of our oil change service

Proper Functioning of Lights and Signals — A basic check of the lights and signals on the vehicle will be performed. This will include the correct working condition of blinkers and hazard flashers in the front and rear, rear reverse lights, parking and side marker lights, as well as high and low beam headlights.

Condition and Tread Depth of Tires — Another important safety item that will be inspected before you drive away from our facility is the tires. Remember that the tires are what hold the vehicle on the road so they are vital to passenger safety. First we'll check the condition of the tires' sidewalls, looking for nicks and bulges. Next, we check the proper depth of the tread. We'll make certain that we check tread depth on several places across the width of each tire to make sure the tread is wearing evenly — a poorly aligned tire could have tread that looks perfectly fine on one side of the tire and tread that is dangerously low on the other. Finally, we'll check the tire pressure to ensure proper inflation and adjust air pressure accordingly.

Brake System Check — A vehicle's braking system is without a doubt its most important safety system. The braking system will be checked for proper actuation including the emergency brake. The most basic check of the braking system is to pump the brakes with the engine off several times until the pedal becomes firm. We should be able to keep solid pressure on the brake pedal for at least 10 seconds without any movement. If the pedal feels soft or there is excessive movement, that could be a sign of trouble.

Fluid Levels — Ensuring that all the systems on the vehicle have been filled to their proper fluid levels is essential. This will help reduce the likelihood of a mechanical problem becoming a safety issue or causing passengers in the vehicle to become stranded. Fluid levels that will be checked as part of an initial safety inspection will include engine oil, brake fluid, engine coolant, power steering fluid, and transmission fluid if accessible.

Electrical and Safety Components — To wrap it up, we will check the instrument panel to make sure that there are no warning lights illuminated (such as "check engine" or "SRS" lights) that may indicate a problem.

ROUTINE MAINTENANCE MENU

Oil Change

Standard Synthetic Blend Oil Change \$32.00
Includes 5-Point Inspection

Full Synthetic Oil Change

Includes 5 Point Inspection \$62.00

TIRE ROTATION

16" and below diameter rims \$25.00

17" and above diameter rims \$35.00

*Additional cost for specialty filters
